Full list of author information is
available at the end of the article

1 Introduction

The bibliography (`report.bib`) must respect BibTeX format. You can cite entries in your bibliography using their tags:

- Cite an article: [1]
- Cite a GitHub repository: [2]

You can use `inline code highlight` . This paragraph shows how to add blank lines and how to start a paragraph without indentation.

Remember that this is a LaTex flavored markdown. Therefore, some characters must be used with an escape character within the text:

`& % $ # _ { } \`

2 Section

You can create additional sections as you prefer. Section title levels are determined by the number of hastags as in a traditional markdown file.

2.1 Subsection

Subsection content goes here. You can create numerated lists:

1. The labels consists of sequential numbers.
2. The numbers starts at 1 with every call to the enumerate environment.

2.1.1 SubSubsection

You can add mathematical formulas. Single dollars ($) are required for inline mathematics e.g. $f(x) = e^{\pi/x}$.

You can also use plain LaTeX for equations:

$$\hat{f}(\omega) = \int_{-\infty}^{\infty} f(x)e^{i\omega x}dx \tag{1}$$

and refer to (**??**) from text.

3 Results

Figure files must be placed at the `figures` folder. You can include figures using the following block:

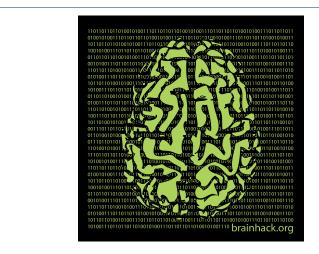

Figure 1 Your caption goes here.

Note that `width=.47 \textwidth` above sets scales the figure size in the PDF.

To change attributes of the figures on the webpage, please see `/figures/figures.css`.

To refer a figure in the text, you need to use the respective label defined in its caption: Fig. 1
